CARBONPROOF AI - PROJECT DESIGN DOCUMENT

Project Title: Mount Kenya Native Reforestation & Agroforestry Project

Project Identifier: VCS-2849 | Methodology: VM0007 v1.6 (ARR)

Host Country: Kenya | Geographic Region: Central Highlands, Meru County

Project Proponent: Mount Kenya Community Agroforestry Trust

Crediting Period: 2026-01-01 to 2045-12-31 (20 Years Fixed)

Target Removal: 125,000 tCO2e Total | Annual Est: 6,250 tCO2e/year

SECTION 1: METHODOLOGICAL ADAPTATION & ADDITIONALITY

This initiative satisfies the additionality hurdle through rigorous investment barrier analysis. Without voluntary carbon finance, steep terrain erosion and high initial seedling nursery capital prevent natural regeneration across the 4,200 hectare degraded perimeter buffer.

SECTION 2: HISTORICAL BASELINE & DEFORESTATION TRENDS

Baseline deforestation determined using 10-year historical Landsat and Sentinel-2 satellite imagery. Reference region annual loss rate: 2.14% per annum. Biomass permanence buffer pool: 20% allocated.

STATUS: Authentic Synthetic Demonstration Document for CarbonProof AI Platform Verification
